

Packgens

Custom packaging, printed to order

Website Editor's Guide

How to change anything on your website, without a developer

INSIDE

- Where every piece of content lives
- Editing the sections that make up a page
- One screen that updates all 21 category pages
- Rewording any form, heading or button
- Step-by-step recipes for everyday changes
- A single quick-reference table

What is in this guide

Your website was built so that you can change it yourself. Wording, prices, photographs, links, whole sections of a page — all of it is editable from the WordPress admin. Nothing in this guide requires a developer, and nothing in it can break the site.

Section	What it covers
1. Before you start	Signing in, and four rules that make everything else easier
2. The Packgens menu	A map of the three screens where your content lives
3. Site Settings	Phone, email, address, social links, the announcement bar
4. Global Content	Wording shared across the whole site, including every form
5. Page sections	Editing the bands that make up a page
6. Product categories	The one screen that updates all 21 category pages
7. Products	Badges, price captions, tabs and feature cards
8. Blog	Writing posts, and what appears beside them
9. Menus	The main navigation and the four footer columns
10. Enquiries	Where form submissions are stored
11. Saved items	How the wishlist works
12. Common tasks	Step-by-step recipes for the things you will do most
13. Quick reference	One table: "I want to change X → go to Y"
14. Questions and answers	Including why one admin screen looks empty

1

Before you start

Signing in

Go to **your-site.com/wp-admin** and sign in with the username and password you were given. If you forget the password, use **Lost your password?** on that screen — a reset link is emailed to you.

Four rules worth knowing

1. Saving is always the last step

Nothing you type takes effect until you press **Update** (on a page, post or product) or **Save** (on the Packgens screens). If you navigate away without saving, your changes are lost.

2. An empty field is not a blank space

Almost every wording field falls back to what the site already says. Clear a field and the original wording comes back — it does not leave a gap on the page. This is why you only need to fill in the things you actually want to change.

3. Hide sections, do not delete them

Every section on a page has a **Show this section** switch. Turning it off hides the band and keeps your text safe for later. Deleting the text means retyping it.

4. Check the front of the site after you save

Open the page in a new browser tab and refresh. If something looks wrong, the fix is almost always to clear the field you just filled in, which restores the original.

Reassurance

You cannot break the website from any screen in this guide. None of them change the site's code. The worst case is wording you do not like, and clearing the field undoes it.

2

The Packgens menu

Look down the black sidebar in the admin. Near the top you will find **Packgens**. Everything that is shared across the site lives under it, on three screens.

Screen	What it holds
Packgens (Global Content)	Wording and content that appears across many pages: every form label, the footer headings, blog headings, the strips above and below the header, the article sidebar, the 404 page
Category Defaults	The content every product category page falls back to. Change it once here and all 21 categories update
Site Settings	Your phone number, email, postal address, opening hours, social profiles, the announcement bar and the header button

The Packgens menu is highlighted on the left. Site Settings is open, showing the Announcement bar tab.

Where page content lives

Page-specific content is not here. To change something that only appears on one page, edit that page — see section 5.

3

Site Settings

Packgens → Site Settings. Six tabs holding the details that appear all over the site. Change the phone number here and it updates in the header, the footer, the contact page and the sidebar quote card at the same time.

Tab	What it holds
Announcement bar	The thin strip at the very top of every page, its live-chat label and link. The switch at the top hides the whole bar.
Header	The blue button in the header and where it points, plus the “Free Shipping” note beside the phone number
Contact details	Phone, its caption, a second phone, WhatsApp, email, postal address and opening hours
Social profiles	Facebook, Instagram, LinkedIn, YouTube and X. Leave one blank and its icon disappears from the site.
Global links	Where the “Get a quote”, “Reviews” and “All products” buttons send people
Form handling	Who receives enquiry emails, the thank-you page, and the message shown after someone sends a form

Tip

The address and opening-hours boxes keep your line breaks. Type them on separate lines exactly as you want them to appear on the site.

Global Content

Packgens → **Packgens**. Thirteen tabs. The first five hold blocks of content; the eight beginning **Text:** hold individual words and phrases.

All thirteen tabs. The Article sidebar tab is open.

The content tabs

Tab	What it holds
Article sidebar	The card beside a blog post: heading, rating, image and tick list
Header strip	The four icons under the header on pages without a large banner
Trust strip	The blue band above the footer
Footer	Newsletter wording, payment and delivery logos, the copyright line
Quote form	The “Get Instant Quote” form’s title, intro, button and small print

The Text: tabs

These hold every remaining word on the site that is not part of a page. Each field shows its current wording as grey placeholder text — so you can see what an empty field will produce before you type anything.

Text: forms. The grey text in each box is what the site says today; type over it only if you want it to say something else.

Tab	Covers
Text: forms	Every label and placeholder in the quote and contact forms, the file-upload text, the contact form title and its button
Text: header	The two search box placeholders
Text: footer	“Instant Information”, “Send Email”, “Call Information”, “Address”, “Follow us”
Text: blog	Filter labels, sidebar headings, “Related Blogs”, “Visit Our Blog”, “Table of Contents”, “Share This Article”, “Read More”
Text: contact channels	“Call Us”, “Send Email”, “Message Us”, “Office Address”
Text: quote card	The blue quote card in sidebars: title, text, phone label, button
Text: saved items	The message shown when a shopper’s saved list is empty
Text: 404 and search	The “page not found” heading, text and buttons

Worth knowing

The quote form and the contact form share these labels. Changing "Full Name" changes it in both.

5

Page sections

Your pages are built from bands stacked on top of each other — a banner, an about block, a process strip, reviews, questions, a call to action. Each band is a **section**, and each section has its own panel on the page's edit screen.

1. Go to **Pages** → **All Pages** and click the page you want to change.
2. Scroll past the main editor. At the bottom you will see a bar labelled **Meta Boxes** — drag it upward or click it to open.
3. You will find a stack of panels: Section Order, Hero, About, Why Choose Us, and so on.
4. Edit the panel you need, then press **Save** at the top right.

The screenshot shows the Packgens website editor interface for the 'About Us' page. At the top, there's a navigation bar with a back arrow, a plus icon, and a 'About Us · Page' title. Below this is the 'Meta Boxes' panel, which is expanded to show the 'Section Order' section. The 'Section Order' panel has a title 'Section Order' and a subtitle 'Tick the sections to show and drag to reorder. Leave untouched to use the default order.' It contains a list of sections with checkboxes: Hero, Categories, About, Mission, vision, values, Quote band, Showcase row, Promo banner, Call to action band, Call to action band (second), Chat bar, Products, Process steps, Why choose us, Comparison, Materials, Statistics, Industries, FAQs, Trusted brands, Reviews, SEO content, and Blog. Below the 'Section Order' panel is the 'Hero' panel, which is also expanded. It has a title 'Hero' and a subtitle 'Show this section'. There is a 'Yes' button next to a checkbox. Below this is the 'Eyebrow' section with a text field containing 'Because good packaging should be the easiest part of your'. At the bottom is the 'Title' section with a text field containing 'Packgens Accessible To Businesses'.

The About page. Section Order is at the top, with the Hero section open below it.

What every section has

Field	What it does
Show this section	A switch. Turn it off to hide the band and keep the content for later.
Eyebrow	The small line of text above the heading (not on every section)
Title	The heading
Description	The paragraph under the heading
...then section-specific fields	Cards, list items, images, tabs — whatever that band is made of
Button	The link at the bottom. Clear the link and the button disappears.

Section Order

The first panel lets you tick which sections appear and drag them into a different order for that page. Leave it untouched and the page uses the standard order.

Lists inside a section

Where a section holds a list — cards, steps, questions, features — you get a stack of numbered rows.

- **Add** at the bottom creates a new row.
- The handle at the left of a row drags it up or down.
- The minus at the right removes a row.

Tip

Two call-to-action bands are available on every page, so a page can open with one message and close with a different one.

6

Product categories

This is the section that saves the most time.

There are 21 product categories, and they all share one set of content: **Packgens** → **Category Defaults**. Edit the black call-to-action band there and it changes on every category page at once.

When a category needs something of its own — usually its own headline and the heading above its product grid — edit that category directly under **Products** → **Categories**. Anything you type there applies to that category only. Anything you leave alone keeps following the default.

The rule to remember

Change it once in Category Defaults. Override only the exceptions.

If you find yourself making the same edit on several categories, you are in the wrong screen — make it once on Category Defaults instead.

The screenshot shows the 'Product Category Defaults' editor. The left sidebar has a dark theme with a navigation menu. The 'Packgens' section is active, showing 'Category Defaults' and 'Site Settings'. The main content area is titled 'Product Category Defaults' and contains a 'Hero' section. The 'Hero' section has a 'Show this section' toggle set to 'Yes', an 'Eyebrow' text field, a 'Title' text field, a 'Description' text area, a 'Layout' dropdown menu set to 'Copy left, quote form right', a 'Background / side image' section with a grid of product images, and a 'Rating badge text' field. On the right side, there is a 'Publish' button and a 'Save' button.

Category Defaults. Everything here applies to all 21 category pages unless a category overrides it.

Products

Edit a product under **Products** → **All Products**. Price, stock, images and the short description stay in WooCommerce's own boxes. Below them you will find **Product Details**, which is the theme's.

Field	Where it appears
Badge	The small label on the product card — “Best Seller”, “Best Price”. Leave it empty for no badge.
Price caption	The “/ unit” text after the price
Delivery note	The dashed button under Add to Basket
Rating strip	The stars and review count above the title
Offer strip	The discount code panel with the copy button
Help card	The “Need help customizing?” card under the gallery
Feature cards	The two cards beside the help card
Tabs	Description, specifications, artwork guidelines and FAQs below the product

Adding a new product

1. Go to **Products** → **Add New**.
2. Give it a name and a short description — the description is what appears on the product card.
3. Set the price under **Product data** → **General**.
4. Add a **Product image** and, if you have more, a **Product gallery**.
5. Tick its **Categories** on the right — this decides which category pages it appears on.
6. Fill in **Product Details** if you want a badge or the extra tabs.
7. Press **Publish**.

8

Blog

Write posts under **Posts** → **Add New** exactly as you would on any WordPress site. Two things are specific to your site:

- **Users** → **Profile** → **Author photo** sets the picture beside your name on a post.
- The sidebar beside a post — contents, trust card, share links — comes from **Global Content** → **Article sidebar**, so it is the same on every post.

9

Menus

Appearance → **Menus**. There are five: the main navigation and the four footer columns.

Menu	Where it appears
Packgens Primary	The main navigation across the header
Packgens Footer Information	First footer column
Packgens Footer Industries	Second footer column
Packgens Footer Products	Third footer column
Packgens Footer Legal	The links along the very bottom

To add a link, pick a page or product category from the panel on the left and press **Add to Menu**, then drag it into place. Drag an item slightly right to make it a sub-item. Press **Save Menu**.

The screenshot displays the WordPress 'Menus' interface. On the left sidebar, the 'Appearance' menu is active, and 'Menus' is selected. The main area is titled 'Menus' and includes a 'Manage with Live Preview' button. Below this, there are tabs for 'Edit Menus' and 'Manage Locations'. A dropdown menu shows 'Packgens Footer Industries (Footer: Industries)' selected, with a 'Select' button and a link to 'create a new menu'. The interface is divided into two main sections: 'Add menu items' and 'Menu structure'. The 'Add menu items' section on the left has a 'Pages' tab with a list of items including 'Saved Items', 'Return Policy', 'Terms & Conditions', 'Get a Quote', 'Industries', 'Reviews', 'FAQs', 'Contact Us', 'About Us', 'My account — My Account Page', 'Checkout — Checkout Page', 'Cart — Cart Page', and 'Shop — Shop Page'. There is a 'Select All' button and an 'Add to Menu' button. The 'Menu structure' section on the right shows the 'Menu Name' as 'Packgens Footer Industries'. It includes a 'Bulk Select' button and a list of items: 'Retail Boxes', 'Cosmetic Boxes', 'Food Boxes', 'Candle Boxes', and 'Automotive Boxes', each with a 'Custom Link' dropdown. Below this is another 'Bulk Select' button. The 'Menu Settings' section at the bottom right has two sections: 'Auto add pages' with a checkbox for 'Automatically add new top-level pages to this menu', and 'Menu location' with checkboxes for 'Primary Menu (Currently set to: Packgens Primary)', 'Top Bar Menu', 'Footer: Information (Currently set to: Packgens Footer Information)', 'Footer: Industries' (which is checked), 'Footer: Products (Currently set to: Packgens Footer Products)', and 'Footer: Legal (Currently set to: Packgens Footer Legal)'.

Appearance → Menus. Pick the menu to edit from the dropdown at the top, then drag items to reorder them.

Advanced

To make a top-level item open a large drop-down panel, open **Screen Options** at the top right, tick **CSS Classes**, then type **mega** in that item's CSS Classes box. Add **cards** as well to show its children as picture cards.

10

Enquiries

Every quote request, contact message, newsletter sign-up and callback request is saved in the admin under **Enquiries** as well as emailed to you.

This matters: if an email is ever delayed, blocked or sent to spam, the enquiry is still here. Nothing is lost.

Set the address that receives the emails in **Packgens** → **Site Settings** → **Form handling**.

11

Saved items

Shoppers can tap the heart on any product to save it for later. The heart in the header shows how many they have saved, and the list lives at **/wishlist/**.

- Signed-in customers keep their list on their account, on any device.
- Guests keep it in their browser for 30 days.
- When a guest signs in, their saved items move onto their account automatically.

The message shown when the list is empty is under **Global Content** → **Text: saved items**.

Common tasks

Step-by-step for the things you are most likely to need.

Change the phone number everywhere

1. Packgens → Site Settings → **Contact details**.
2. Edit **Primary phone**.
3. Press **Save**.

It updates in the header, the footer, the contact page and the sidebar quote card at once.

Change the announcement bar, or switch it off

1. Packgens → Site Settings → **Announcement bar**.
2. Edit **Announcement text**, or set **Show announcement bar** to No.
3. Press **Save**.

Reword a form field

1. Packgens → Packgens → **Text: forms**.
2. Find the field — the grey text shows its current wording.
3. Type the new wording and press **Save**.

Hide a section on one page

1. Pages → All Pages → open the page.
2. Open the **Meta Boxes** bar at the bottom.
3. Find that section's panel and set **Show this section** to No.
4. Press **Save**.

Change something on every category page

1. Packgens → **Category Defaults**.
2. Edit the section you want to change.
3. Press **Save**. All 21 categories update.

Give one category its own headline

1. Products → Categories → hover the category → **Edit**.
2. Scroll to the **Hero** panel and set the title.
3. Press **Update**. Only that category changes.

Add a product to a category page

1. Products → All Products → open the product.
2. Tick the category on the right, under **Product categories**.
3. Press **Update**.

Write and publish a blog post

1. Posts → **Add New**.
2. Give it a title, write the body, and set a **Featured image** on the right.
3. Choose a **Category**, then press **Publish**.

13

Quick reference

One table for the whole site.

I want to change...	Go to
Phone, email, address, opening hours	Packgens → Site Settings → Contact details
Social media links	Packgens → Site Settings → Social profiles
The bar at the very top of the page	Packgens → Site Settings → Announcement bar
The blue button in the header	Packgens → Site Settings → Header
Who receives enquiry emails	Packgens → Site Settings → Form handling
Wording on a form	Packgens → Packgens → Text: forms
Footer column headings	Packgens → Packgens → Text: footer
“Read More”, blog headings	Packgens → Packgens → Text: blog
The “page not found” page	Packgens → Packgens → Text: 404 and search
The strip of icons under the header	Packgens → Packgens → Header strip
The blue band above the footer	Packgens → Packgens → Trust strip
The card beside a blog post	Packgens → Packgens → Article sidebar
A section on one specific page	Pages → that page → Meta Boxes
The order of sections on a page	Pages → that page → Section Order
Content on all category pages	Packgens → Category Defaults
One category only	Products → Categories → edit that category
A product's badge, tabs or cards	Products → that product → Product Details
A product's price or images	Products → that product → Product data
Navigation and footer links	Appearance → Menus
A blog post	Posts
Your author photo	Users → Profile → Author photo
Form submissions people have sent	Enquiries
The logo	Appearance → Customize → Site Identity

Questions and answers

I saved a change but the site looks the same

Refresh the page in your browser — hold Shift and press Reload to bypass the cache. If it still looks the same, check you saved the right screen: content that appears on one page lives on that page, and content that appears everywhere lives under Packgens.

I cleared a field and the old wording came back

That is intended. Wording fields fall back to the site's original text so an empty field never leaves a blank space. To change the wording, type the new wording. To remove a whole band, use its **Show this section** switch.

I changed one category and they all changed

You were on **Category Defaults**, which all categories share. Undo it there, then make the change on the individual category under Products → Categories.

I changed Category Defaults and one category ignored it

That category has its own value saved for that field, which overrides the default. Clear the field on the category and it will follow the default again.

The SCF → Field Groups screen is empty. Is something wrong?

No. The fields are built into your website's theme rather than stored in the database, which keeps them safe from accidental deletion and identical between your test and live sites. That screen only lists fields created through the admin. All of your fields are working — they appear on the screens in this guide.

Can I add a new section to a page?

You can turn on any of the sections your site already has, using **Section Order** on that page. A brand-new kind of section — a layout that does not exist yet — needs a developer.

Can I break the site?

Not from the screens in this guide. None of them change code. The worst outcome is wording you do not like, and clearing the field restores the original.

Important

Before launch: the Terms & Conditions, Privacy Policy and Return Policy pages ship with placeholder wording written to be replaced. Have your own legal adviser supply the real text, then paste it into those three pages under **Pages**.

If you get stuck on something this guide does not cover, send a screenshot of the screen you are on and a note of what you were trying to change.
